### Description

The Invesco US QVM Multi-Factor Index is a broad-based index that employs a security-ranking model applied to US large- and mid-capitalization equities. The model is based on three well-established factors: quality, value and price momentum. Factor weights in the model are set such that each factor contributes equally to the risk of the overall model.

### Methodology Highlights

The Index Universe includes all constituents of the Invesco Indexing Investable Universe designated as US large- or mid-capitalization securities. The Index weighting scheme is designed to reflect both a security's market capitalization and its factor exposure. Each security selected for Index inclusion is weighted proportionally to its factor-tilted market capitalization. Model scores are computed for all securities in the Index Universe. The model is a weighted combination of factors scores for quality, value, and price momentum.

### Historical performance

### Index performance (%)

Total Return (TR)	30.73	-4.74	25.43	11.67	-0.03	14.58	36.72	17.77	11.00	16.84

The Index was launched on 5/22/2020.

All data prior to its launch date is back-tested (i.e. calculations of how the Index might have performed over that time period had the Index existed). Back-tested performance is subject to inherent limitations because it reflects retroactive application of an Index methodology and selection of Index constituents with the benefit of hindsight. Past performance, actual or back-tested, is no guarantee of future performance.

The Total Return Index assumes dividends are reinvested in the Index after the close on the ex-date.
